DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 21, 22, and 10 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-7 of U.S. Patent No. 6,395,859. Although the conflicting claims are not identical, they are not patentably distinct from each other because both claim the similar PCP polymer with formal linkages.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 21, 22, and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tremblay (4,415,728) in view of Kuczynski (5,872,158).

Tremblay discloses the basic polymer for use in a propellant composition. Example 1 shows the formation of polycaprolactone diol. The use of formal linkages is not disclosed.

Kuczynski teaches the use of formal linkages in polymers. The linkages hydrolyze and are used to adjust the degradability of the polymer to match the requirements of the application for which they are being used. (col. 4, lines 35-50)

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the formal linkages as taught by Kuczynski with the polymer disclosed by Tremblay since it will result in a degradable polymer that is useful in a propellant and also since Kuczynski suggests that the linkages can be varied in order to suit the particular application. It is well-settled that optimizing a result effective variable is well within the expected ability of a person of ordinary skill in the subject art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980), In re Aller, 220 F.2d 454, 105 USPQ 233 (CCPA 1955).

Response to Arguments

5. Applicant's arguments with respect to claims 21, 22, and 10 have been considered but are moot in view of the new ground(s) of rejection.
